

Versioning

- [GIT](#)

GIT

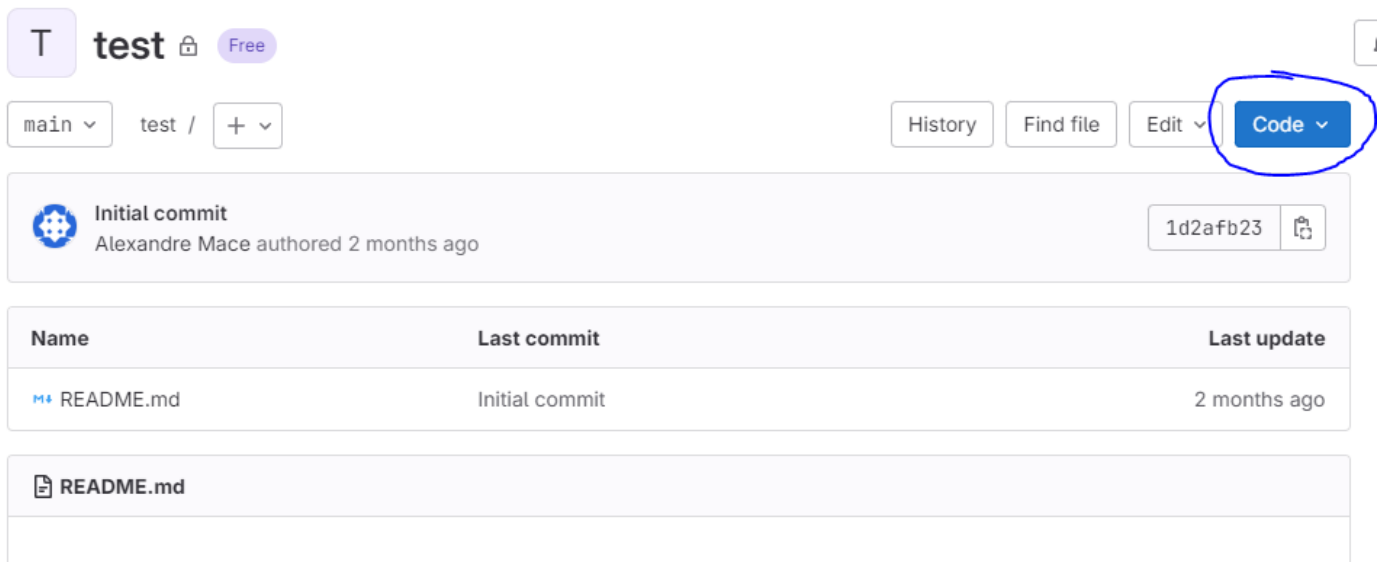

On va créer un répertoire GIT et s'y déplacer.

```
BASTION-FRONT-01:~# mkdir GIT && cd GIT/  
BASTION-FRONT-01/GIT:~#
```

Si GIT n'est pas installé:

```
apt update && apt install git
```

Maintenant il faut se rendre sur notre repo et cliquer sur code.

The screenshot shows the GitHub interface for a repository named 'test'. At the top, there is a navigation bar with the repository name 'test' and a 'Free' badge. Below this, there are buttons for 'main', 'test /', and a plus sign. To the right, there are buttons for 'History', 'Find file', 'Edit', and 'Code'. The 'Code' button is circled in blue. Below the navigation bar, there is a section for the 'Initial commit' by Alexandre Mace, dated 2 months ago, with a commit hash of 1d2afb23. Below this, there is a table with columns for 'Name', 'Last commit', and 'Last update'. The table shows a file named 'README.md' with the 'Initial commit' and a last update of '2 months ago'. Below the table, there is a section for the 'README.md' file.

Name	Last commit	Last update
README.md	Initial commit	2 months ago

Et il faut copier le Clone with SSH.

Ensuite faire:

```
git clone (mettre le liens)
```
