Create new project

Create blank project

Create a blank project to store your files, plan your work, and collaborate on code, among other things.

Create from template

Create a project pre-populated with the necessary files to get you started quickly.

Import project

Migrate your data from an external source like GitHub, Bitbucket, or another instance of GitLab.

Run CI/CD for external repository

Connect your external repository to GitLab CI/CD.

You can also create a project from the command line. [Show command](#)

Puis on remplit les cases a notre convenance .

Create blank project

Create a blank project to store your files, plan your work, and collaborate on code, among other things.

Project name

Must start with a lowercase or uppercase letter, digit, emoji, or underscore. Can also contain dots, pluses, dashes, or spaces.

Project URL

Project slug

Want to organize several dependent projects under the same namespace? [Create a group.](#)

Project deployment target (optional)

Visibility Level [?](#)

Private

Project access must be granted explicitly to each user. If this project is part of a group, access is granted to members of the group.

Public

The project can be accessed without any authentication.

Project Configuration

Initialize repository with a README

Allows you to immediately clone this project's repository. Skip this if you plan to push up an existing repository.

Enable Static Application Security Testing (SAST)

Analyze your source code for known security vulnerabilities. [Learn more.](#)

Revision #6
